SUMMARY

B.S. Computer Science graduate and M.S. student in Intelligent Robotic Systems with experience developing and deploying software applications. Skilled in Python, C++, JavaScript, React, Node.js, OpenCV, MATLAB, and AWS. Projects include computer vision, robotics modeling, and video processing. Seeking entry-level software development opportunities; open to relocation.

SKILLS

- Python & C++
- JavaScript / React
- Node.js / AWS
- Git / CMake
- OpenCV / computer vision
- SIFT / FLANN matching
- MATLAB / robotics
- Linux / Ubuntu
- Software debugging
- Web application delivery
- Numerical modeling
- Hardware prototyping

EXPERIENCE

Manager in Training

August 2026 · Present

Jimmy John's · Seymour, IN

- Training in high-volume food operations: food safety, sanitation, inventory, and shift leadership.
- Keep equipment and work areas to food-safety standard; support coverage during service.
- Available for nights, weekends, and overtime while enrolled full-time in graduate school.

Founder / Technician

March 2026 · Present

Colosys LLC · Brownstown, IN

- Developed and deployed a commercial web application using React, Node.js, and AWS.
- Built and debugged software and hardware prototypes, including robotics and microcontrollers.
- Applied software troubleshooting across application code, sensors, and control systems.

Shift Manager

January 2019 · June 2020

Arby's · Seymour, IN

- Ran shifts in food production: quality, cleanliness, inventory, customer service, and crew delegation.
- Monitored sanitation and food-handling standards; handled equipment and floor problems.
- Mediated issues and maintained operations during peak volume.

EDUCATION

M.S. Intelligent Robotic Systems (in progress)

Full-time

Kennesaw State University · Department of Robotics and Mechatronics Engineering

Coursework includes mechatronics, soft robotics, sensors, actuators, and control.

B.S. Computer Science

May 2025 · GPA 3.5

Southern New Hampshire University

A.S. Computer Science

2023

Southern New Hampshire University

ACADEMIC SOFTWARE PROJECTS

- Python / OpenCV: SIFT, FLANN feature matching, homography estimation, video processing.
- C++ / OpenCV: object detection pipeline, video processing, CMake, Linux development.
- Python / NumPy: built KNN from scratch with Euclidean and Manhattan distances.
